In Visual Studio, open Package Manager Console and run below command to install Microsoft.AspNet.WebApi.Client nuget package:

Install-Package Microsoft.AspNet.WebApi.Client

HttpClient Console Application Code:

```csharp
using System;
using System.Collections.Generic;
using System.Linq;
using System.Net.Http;
using System.Text;
using System.Threading.Tasks;

namespace HttpClientDemo
{
    public class Program
    {
        public static void Main(string[] args)
        {
            using(var httpClient = new HttpClient())
            {
                httpClient.BaseAddress = new Uri("http://localhost:25882/api/");

                var resp = httpClient.GetAsync("values");
                resp.Wait();

                var result = resp.Result;

                if(result.IsSuccessStatusCode)
                {

                var getConent = result.Content.ReadAsAsync<IEnumerable<string>>();
                getConent.Wait();

                var getContentResp = getConent.Result;

                foreach(string a in getContentResp)
                {
                    Console.WriteLine(a);
                }

                }

                Console.ReadLine();
            }
        }
    }
}
```
